

The Team on HackYeah

Project

Secured health

We protect your sensitive data - you are not afraid to stay well!

Desktop, Android and iOS

Poland

Why control over own data is important?

- People are afraid that data can be used without control
- Address awareness and concerns of data ownership
- Control who get access to your data
- Not losing opportunity to get medical help due that concerns (i.e. psychiatric help, or help related to venereal disease)
- Law regulations support already provided (GDPR)

Success metrics

Increased data protection

Secured sensitive information

well-being improvements

→ Export Data

- Transfer your medical data between private/public health service providers
- Have secured access in one place even if abroad
- Authorise an access to your data
- Check the history of your data verifications

Benefits

you can authorise the attempts to check your medical history

you can reject an access to check your medical history

you can check WHO and WHEN has reviewed your medical history

What's next?

- Data interoperability for better social security and reduction of poverty
- When you own your data you can choose another doctor/company and ask for help
- If you have trouble getting access to a doctor, ask AI
